INTEWORX.NET

ENGINEERING AND CONSULTING SERVICES

CONTROLS

AUTOMATION

INTEGRATION

*L*et our engineering professionals assist you in automating, integrating and monitoring your processes to achieve optimum efficiency.

INTEWORX.NET offers consultation and services in process automation and systems integration. INTEWORX.NET's sound and affordable solutions will optimize production and improve your facility's operations.

INTEWORX.NET's Engineering and Consulting Services:

- PLC, PC-Based Control
- SCADA Configuration and Programming (PC, Web, PDA-Based)
- Custom Programming
- Control Panels—Design and Build
- Data Management
- Automatic Identification and Bar Code

- Batch Processing and Controls
- Automation Consulting and Process Evaluation
- Technical Documentation
- Product Tracking and Traceability
- Training and Technical Documentation

"When deciding on who to help us with the integration, we knew right away to turn to INTEWORX.NET. The project took about six weeks and ran smoothly. We were able to beat our target date for start-up by a full week. We have been well pleased with the outcome. It has met our expectations in keeping the cost down while increasing our pick efficiency and maintaining our 99.98 percent accuracy rate."
—Mark Hermann, Logistics Team Captain, AutomationDirect

Optimize productivity through integration and innovation.

INTEWORX.NET has a dedicated team of highly versatile professionals. Our capabilities span every facet of the industrial market. INTEWORX.NET specializes in process automation and systems integration within water and wastewater treatment, food processing and warehouse facilities. Some of our most recent projects include wastewater treatment controls, recipe management, custom control software programming, order tracking, and inventory management.

Warehouse Controls

INTEWORX.NET is experienced in developing customized applications to increase efficiency in operations and aid in warehouse management. We create affordable, industrial strength applications for PCs, PDAs and Web-based use. INTEWORX.NET implements inventory management systems that present warehouse data conveniently and understandably. Plant employees are able to operate our warehouse management software with little or no training.

Water and Wastewater Treatment Controls

To serve public interest, water treatment facilities and other utility divisions are required to use their allocated resources, including money and manpower, in the most efficient manner possible. INTEWORX.NET specializes in implementing controls and monitoring systems that help make this possible. We can increase your I/O capacity, with a system that is easier to update and cheaper to maintain. Your facility will be equipped with the most innovative technology – in a way that fits within your existing architecture and overall utility design. INTEWORX.NET can increase efficiency and make your job easier, by replacing your current system with one that saves time and money.

Food Processing Controls

The presence of many delicate variables, such as belt speed, air pressure and temperature, can cause many food and beverage processing plants to struggle with information overload when trying to monitor and process their industrial data. INTEWORX.NET develops systems which manage factory data, and present statistics in a way that makes them useful to everyone from the plant floor to the corner office and beyond. Our systems enable plant employees to monitor and determine the status of their plants quickly and easily. They empower management to easily process and analyze data. With our systems, even product traceability is made a convenient and efficient reality. INTEWORX.NET turns raw data into useful information by presenting it to those who need it in a way that works for them.

"As we use the new control system, it continues to exceed our expectations. Our employees have found it easy to use and understand, and there was very little training necessary. We have increased our I/O points from 1,200 to 6,000 and expect the system to meet our needs for quite some time."

—Jon White, Maintenance Superintendent, City of Rock Hill, South Carolina
